Improving Behavioral Health Care

Software for assessing, monitoring & managing patients with behavioral health disorders

mehealth.com/bh

WHY IS IT NEEDED?

Long-term monitoring is key to the successful management of patients with chronic behavioral health conditions.

To monitor your patients effectively you need to be able to record the right parameters of mental and physical health conveniently and cost effectively.

These metrics should be measured regularly, and the data collected and analyzed.

You'll want to graph your chosen parameters to monitor the impact of interventions. The information can direct you and your patients to the best treatment decisions.

Being able to capture outcome data electronically, including input from the patient via a smartphone or tablet app, would be ideal. It would be even better if it could automatically generate notes for your EMR.

Sound good?

mehealth™ for behavioral health does all this. And more.

MEHEALTH WORKS

+ Helps identify 'best practice' care for each individual patient

+ Enables early & effective response to avoid crisis and improve outcomes

+ Allows analysis of individual patient data & entire patient population

+ Includes *"The Maudsley Prescribing Guidelines in Psychiatry"*

mehealth™ for behavioral health does what your EMR doesn't

EFFECTIVE INTEGRATED HEALTHCARE

mehealth for behavioral health enables teams of carers, working together, to deliver effective integrated healthcare.

Healthcare providers implement our systems to improve care delivery in five key areas:

1. Patient-Centered Care
2. Population-Based Care
3. Data-Driven Care
4. Evidence-Based Care
5. Accountable Care

FUNCTIONS

+ Automated scoring and interpretation of assessment scales from scale library

+ Notification of symptom deteriorations or worsening side effects

+ Graphs presenting symptom scores and psychological, physical & physiological metrics

+ Automatically generated visit summaries

+ Easy tracking of interventions and outcomes

+ Facilitates communication between care providers

+ Streamlining patient management and office flow

+ Smartphone app for remote patient monitoring

+ Caseload triage

+ EMR integration

BENEFITS

+ Improves efficiency, saving time & reducing costs

+ Integrates remotely collected patient data

+ Improves communication with patient & team

+ Enables optimum care delivery: right treatment, right patient, right time

+ Allows closer monitoring of patient & population outcomes

+ Provides insights into care delivery against quality metrics

+ Adds 'missing' functionality to EMR/EHR systems
